

TATO_{pro}

Disposable microwave thermal ablation probes to use with TATO

Optimal ablation shape

Ergonomic handle

18 Gauge shaft

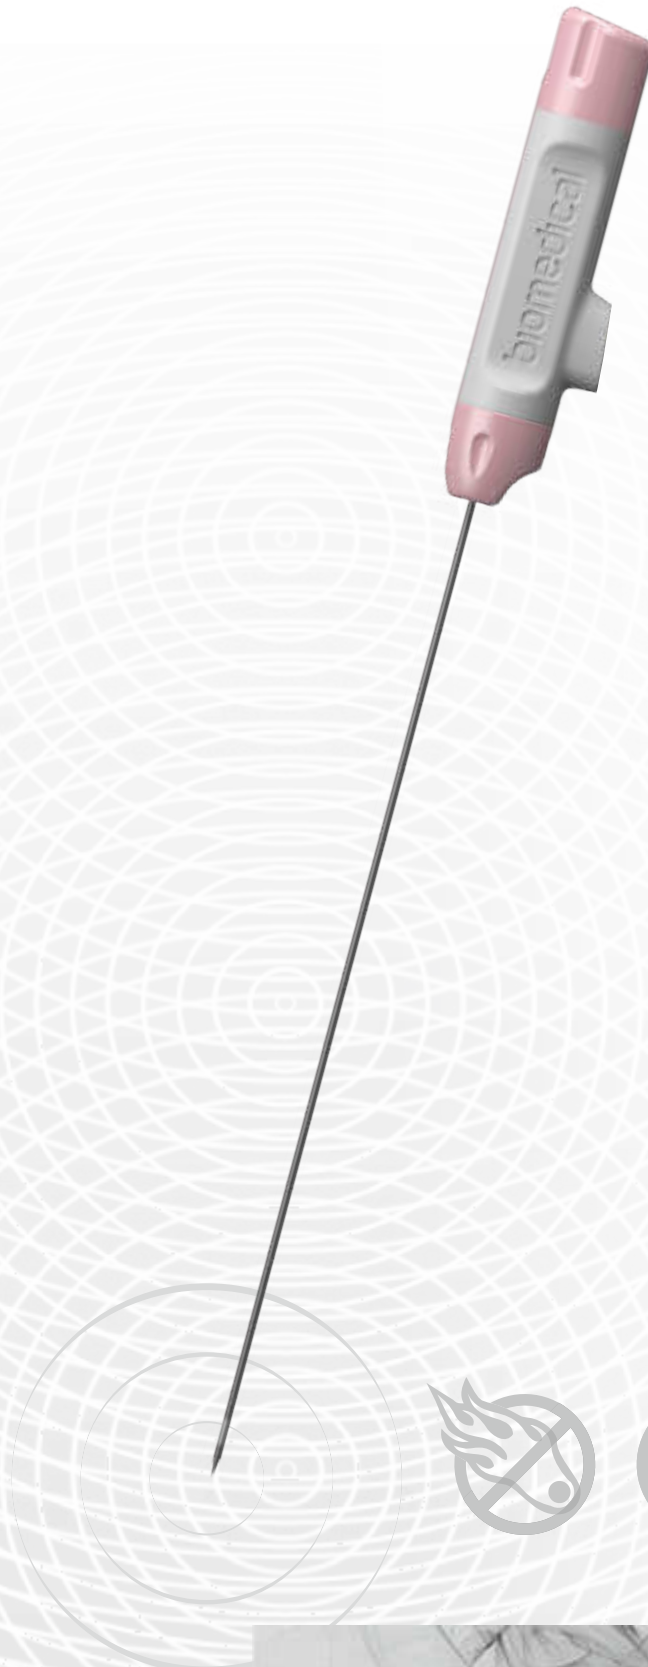

Connector for liquid injection

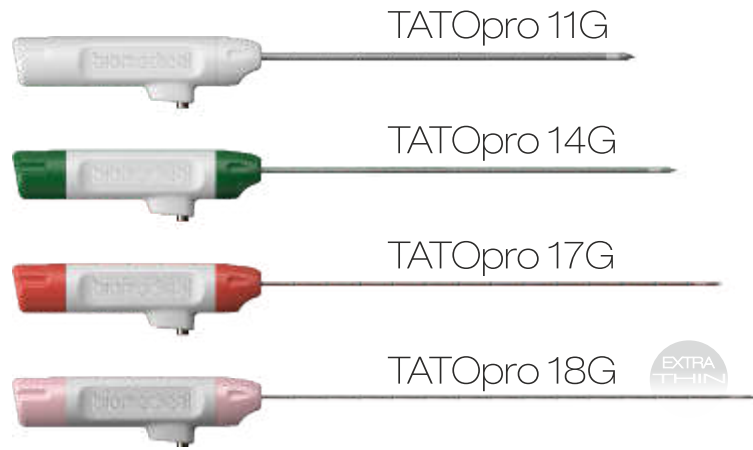

Up to 4 applicators per procedure

Sterilizable and reusable cable

biomedical

A wide range of choice: TATOprowaterproof is the only probe that comes with the 18G version, a size that opens the door to new applications, such as thyroid, prostatic thermal ablation and that makes liver ablation safer. TATOprowaterproof also comes in traditional 14G and 17G sizes and 11G version for intraoperative ablation.

Liquid injection: TATOprowaterproof are the first applicators with a luer lock connector and a tip with side holes that allow injecting drugs, biological agents, alcohol, saline solution or microbubbles during the treatment.

Precise probe positioning: the special cables carrying the microwaves can be detached from TATOprowaterproof handles and then connected back after the probes have been placed, allowing an easy positioning under CT scan.

Absence of collateral effects: TATOprowaterproof are the only probes that can work uncooled. Thanks to the VLL™ (Very Low Loss) technology they perform a safe procedure that doesn't lead to charring, chimney or comet effects.
